

Your ServiceTitan data is telling a story. BlucolarIQ reads it back to you.

BlucolarIQ turns the tickets, calls, and close rates already in ServiceTitan into coaching a manager can act on the same day - no new software to learn, nothing to change in the field.

WHAT IT DOES

Tech Performance Analytics

Every technician's close rate, average ticket, and revenue next to the shop average. Spot your closers and the techs leaving money on every call.

Live Coaching Dashboard

A live pulse of today's shift: which techs ran calls without selling, AI-backed reasons why, and coaching tips a manager can use between calls.

AI Coaching Opportunities

AI reads ticket notes, job types, and tech history to flag patterns a busy manager would miss - and suggests exactly what to say to each tech.

Call-Center Wallboard

A live TV display for the office: calls today, booking rate, per-CSR leaderboard, unbooked-call alerts, and hourly pacing against target.

Technician Commission Tracking

Techs watch their own commissions and pay math add up in real time. Admins and managers set each employee's commission rate in one place - every payout matches the agreement, every time.

WHY IT PAYS

- ▶ **Recovered revenue.** A single extra closed job per tech per month pays for the platform many times over. BlucolarIQ finds the sales left on the table - and how to win the next ones.
- ▶ **Coaching from the office.** Data-backed talking points for each tech instead of guesswork or ride-alongs. A tech gets help the same shift, not at a quarterly review.
- ▶ **Spread what works.** Find out what your top closers do differently and turn it into training for the whole shop.
- ▶ **Commissions without the arguments.** Techs see their exact pay math in real time, rates are managed in one place, and payout questions get answered by the dashboard - not the front office.

BUILT TO NEVER GET IN YOUR WAY

- ✓ **Read-only ServiceTitan integration** - it only reads job updates, so a failure on our side can never break your system.
- ✓ **Enterprise-grade reliability** - redundant hosting with automatic failover, continuous backups, and a self-retrying sync queue.
- ✓ **Scales with you** - one shop or 500+ technicians across locations, no re-engineering. SSO and an uptime SLA on annual contracts.

PRICING From **\$29 per tech per month**, with volume tiers down to **\$16** for large shops. **30-day pilot** available - prove the recovered revenue before you roll out shop-wide.
